Smart Combo Panda Internet Security 2009

€35,95 (including 19 % tax)

If you want to keep your information and personal files safe and available anytime and anywhere, we suggest you purchase Panda Global Protection 2009.

Maximum protection with minimum impact on your PC

Traditional antivirus products cannot protect you against today's threats, but Panda Security is always one step ahead, protecting users against the very latest cyber-criminal attacks. Our new 2009 solutions are based on the *Collective Intelligence* model, the most innovative online security technologies to protect you against malware and identity theft.

How FoarStone's DriveClone Works

DriveClone clones an entire hard drive or a single partition by copying used data sectors from a source hard drive to a destination hard drive. If you need to clone to a larger hard drive, DriveClone lets you resize the partition(s) on the destination hard drive.

Cloning and imaging are done within Windows and do not require a system restart. All personal data, operating system files, settings, and configurations will be duplicated on the destination hard drive.

À

When DriveClone creates a complete backup image, it copies only used data sectors on a hard drive or selected partition and saves the data as a compressed image file. The image file can be stored on CD-DVD, on a network share, to external USB or FireWire hard drive, or to another hard drive within your computer.

When DriveClone incrementally updates a saved image, only changed data sectors are backed up. This reduces the file size of the backup image and the time it takes to complete the incremental update.
